How to Configure the Discord Nitro Keyboard

Thank you for purchasing the Discord Nitro Keyboard . This is the resource for configuring the Discord Nitro Keyboard, which is a QMK and Via enabled mechanical keyboard.

Please note the Nitro Keyboard requires a unique JSON file to be configured with VIA. Find the instructions below with more information. JSON file - Download Link

How do I configure Nitro Keyboard?

Download VIA Software

The Nitro Keyboard and RGB lighting can easily be configured using the VIA Keyboard Configurator.
1. To download the VIA Keyboard Configurator, please go to their Github here and download the software for your relevant operating system - Windows, Mac, or Linux

Configuring using VIA

VIA will not automatically detect the Nitro Keyboard layout and requires a simple .JSON file import.
1. Connect the Nitro Keyboard to your computer.
2. Download the Nitro Keyboard JSON file onto your computer through this link: JSON LINK
If the file opens in your browser, please download the file by right clicking the link
and selecting "Save Page As..."
3. Launch the VIA Keyboard Configurator
4. Settings > Show Design tab
5. Design > Load Draft Definition
6. Select the JSON download saved from step 2.
7. You can now configure the Nitro Keyboard, the RGBs, and the different layers. Changes are made real time to the keyboard, and no specific steps are needed to save them. It automatically updates with each change. If you would like to save multiple layouts, you can utilize the Save/Load layout feature found in VIA.

Let us know if you have any questions. We also look forward to hearing any questions you may have and sharing the different Nitro Keyboard layouts with the community. You can reach out to us at support@kono.store.
